

AKSHITH KUMAR

Software Development Engineer III/ AI Game Engineer

PROFESSIONAL SUMMARY

- Unity3D Specialist (7+ Years): Expert in designing and building high-performance, scalable multiplayer and real-time systems across mobile and cross-platform environments.
- Advanced Architecture: Proficient in Unity ECS, DOTS, and Netcode for Entities to build optimized real-time simulations and reusable game features.
- Multiplayer & DevOps: Extensive experience with Socket.IO, Photon, and automated CI/CD pipelines using Jenkins and Cake (C# Make).
- AI Implementation: Integrated GenAI and agentic AI workflows to optimize development speed and productivity for the extraction shooter Lila Black.

WORK HISTORY

Unity Gameplay Developer 11/2025 to Present Lila Games - Bangalore

- Worked on the development of Lila Black, a multiplayer extraction shooter game.
- Developed editor tools to streamline workflow and improve development efficiency.
- Implemented a node-based tutorial system for flexible and scalable onboarding flows
- Contributed to gameplay and UI systems, ensuring smooth integration and performance.

Software Development Engineer III, 07/2025 to 10/2025 Mobile Premier League (MPL) - Bangalore

- Engineering core game features for seamless integration across multiple projects.
- Designing and optimizing multiplayer systems for card multiplayer games to enhance user experience.

Senior Software Engineer, 10/2022 to 07/2025 Quest Global - Bangalore

- Developed a Unity ECS-based simulation project with an interactive inventory system and save functionality.
- Implemented CI/CD pipelines with Cake (C# Make) and Jenkins, and developed a custom UI diff tool to support automated testing and streamline QA processes.

Projects:

Runtime Simulator (Unity ECS Tool)

- developed a simulation project that allows users to create a world, save it, and restore it at runtime using Unity ECS, Job System, and Burst Compiler.

Achievements:

- Improved simulation performance using optimized Unity ECS.
- Received client appreciation for the Runtime Simulator project.

SKILLS

Unity 3d

C#

Unity ECS

Multiplayer (Socket.io,Unity
Netcode for Entities)

Unity Test Framework

SOLID Principle

Design Pattern(Singleton,Observer)

Zenject

Build Automation (Jenkin's, C#
Make)

Version Control (Git,plastic SCM)

Platform (Android, iOS, WebGL,
Desktop,AR)

State,Command,MVC

C

C++

Unreal

Gen-AI

Software Engineer/Unity Developer, 04/2021 to 10/2022

Pole To Win - Bangalore, India

- Developed casual, hyper-casual, and real-time multiplayer games in Unity3D and C#, utilizing Zenject for dependency injection, and Unity ECS for scalable, high-performance systems.
- Built an endless runner game using Zenject for dependency injection.

Projects:

REMAG – Connecting Gamers (Cross-Platform: Android, iOS, WebGL, PC)

- Developed Unity modules for 3D user profile customization, and implemented UAAL-based native bridge communication to ensure cross-platform compatibility and optimized performance across Android, iOS, WebGL, and PC.

Software Engineer II, 06/2018 to 12/2020

Juego Studio Private Limited India - Mangalore, India

- Developed endless runner, hyper-casual, strategy, and casual games, including multiplayer games with real-time chat integration using Socket.IO.
- Provided ongoing bug fixes and performance improvements to ensure smooth gameplay and user experience.

Projects

Alnahsharun (3D Hyper-Casual Runner Game) | [Play Store](#) | [App Store](#)

- Developed an endless runner game with a Dubai-inspired theme, featuring multi-theme support, and unique gameplay mechanics, which received positive user feedback.

Back to Rockport (Casual Runner Game) | [Play Store](#) | [App Store](#)

- Worked on a music-based endless runner game featuring unique power-ups and character abilities to enhance the gameplay experience.
-

PERSONAL PROJECTS

Card Matching

- Designed and developed a casual card-matching game in Unity3D and C#, structured with multiple grids and levels to enhance gameplay variety.

Mine Sweeper (Puzzle Game)

- Developed a Minesweeper-style game in Unity3D and C#, featuring a smart algorithm and auto-solve functionality to enhance gameplay experience.

Slowmo 3D (Hyper-Casual Runner)

- Developed a hyper-casual game with slow-motion effects and physics-based interactions to enhance immersion, using modular level design for rapid iteration and scalable content.
-

EDUCATION

Bachelor of Engineering, Computer Science, 05/2018

Sahyadri College of Engineering And Management - Mangalore
